-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Applicants use the term of "exercising" while on page 5 of applicants specification applicants define "exercise cycle" as a preimaging blending cycle. Applicants' claims should be directed to the defined term of exercising.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jadwin et al 136 in view of Parker, Takeda et al and Kane et al. Jadwin et al teaches the use of MICR printing with the magnetic toners in which the development system note Col. 2. Jadwin fails to teach the exercise of the developer. Exercise of the developer will place the developer in proper condition for image development. Parker teaches the use of an auger to mix the developer along with heat note applicants' claims 2 and 12 to warm the developer and reduce the water content of the mixture. Humidity is the source of

moisture that is removed by the mixing and heating of the developer. Kane et al also uses an impeller to mix the developer when the toner is added to the mixture to provide a uniform developed density for the image. Takeda et al. also utilizes an agitating means Col. 9 lines 30-35 in the developer to mix the developer prior to imaging. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use as the exercising means the known agitating means of impeller or auger as the mixing means and the heating of the toner prior to the development of the image to provide an even density to the developed electrostatic image.
